

We use two CACI machines – each specialising in different treatment processes.

The award winning **CACI Quantum** is probably the best-known micro current system within the beauty industry, and is considered by many to be the most advanced system of its kind. The treatments, which are both preventative and corrective, can often produce results so dramatic that the CACI name is now synonymous with "the non-surgical face lift". Inevitably, CACI has developed a consequential array of celebrity devotees!

The specific pre-programmed modes incorporated into the CACI Quantum allow extremely personalised treatments of both the face and body.

The CACI Quantum utilises micro current facial techniques to redefine facial muscles, reduce lines and wrinkles, and tighten and tone sagging muscles. The micro current does not contract the facial muscle but rather re-educates the muscles to achieve the results. Active micro current can also be combined with a powerful hydrating mask.

Micro current benefits:

- ✓ Lifts and tones facial muscles
- ✓ Reduces the appearance of lines and wrinkles
- ✓ Increases blood and lymph circulation
- ✓ Enhances the penetration of skin care formulations
- ✓ Increases the production of collagen and elastin
- ✓ Increases protein synthesis and cell membrane transport
- ✓ Increases mitochondria activity and adenosine triphosphate (ATP) production

The CACI quantum also utilises faradic technology to firm and tone the larger body muscles, redefining body contours and providing measurable inch loss. Both the micro current facial process and the faradic body process can be combined in a single treatment to facilitate a total body result.

Faradic benefits:

- ✓ Firms and tones body muscles
- ✓ Measurable inch loss
- ✓ Stimulates blood circulation
- ✓ Passively exercises the muscles
- ✓ Tones Abs – a typical 20 minute stomach treatment is equivalent to doing 300 perfect sit ups!

Treatments with the CACI Quantum can be individually tailored to address the following:

- ✓ Facial Toning
- ✓ Lines & Wrinkles
- ✓ Eye Bags
- ✓ Skin Hydration
- ✓ Neck Skin Sagging
- ✓ Cellulite
- ✓ Slimming
- ✓ Hand Skin Wrinkling

The highly prestigious **CACI ChromaOxy** machine incorporates CACI's top end Microdermabrasion, Chromatherapy and Oxygen treatments. This is their most comprehensive machine, and is normally only available in specialist London beauty clinics and other major city centre locations.

The Microdermabrasion process utilises microdermo percussion, which gently exfoliates through a rapid tapping action of perfectly round quartz silica microspheres propelled onto the skin. The microspheres are a very fine micron grade and, together with the microdermo percussion, offers a significant advancement over traditional microdermabrasion systems, which normally use much larger jagged aluminium oxide crystals.

The utilisation of vacuum suction incorporates a deep cleansing, painless skin peeling method with very little redness or irritation. Photo stimulation and vibratory massage with a special soothing gel is applied after the skin peeling to hydrate, soothe and calm the skin. In our opinion, this gentle process offers state of the art microdermabrasion results, with the photo stimulation affording an almost immediate visual calming. A combination of Red and Blue LED Light Therapy (Chromatherapy) may help a variety of skin problems but is particularly effective on acne-blemished skin.

Oxygen Therapy bathes the skin in a delicate soothing mist of pure oxygen and micronised vitamins. Particularly effective for irritated or sun damaged skin, pulsed oxygen pressure painlessly pushes the serums deep into the skin enabling them to act more effectively. Oxygen works within the skins cells and revitalises dull, polluted or stressed skins by boosting cell renewal. Oxygen is also naturally antibacterial and healing.

The oxygen serum is designed to give immediate results, leaving the complexion revitalised and velvety smooth. However, more gradual results may be noticed over time as skin renewal plumps out fine lines, acts to replace scar tissue and gives a more general youthful glow.

Pure oxygen, working in synergy with aromatherapy to combat stress and alleviate tension, can be breathed throughout the treatment to help thoroughly relax and revitalise.

Aura is extremely proud to offer CACI ChromaOxy treatments, which were developed to have a dramatic anti-aging effect as well as improve a variety of common skin conditions. Treatments can be individually tailored to address the following on face, hands, feet and body:

- ✓ Lines & Wrinkles
- ✓ Acne & Blemishes
- ✓ Sun Damage
- ✓ Stretch Marks
- ✓ Scar Tissue
- ✓ Pigmentation
- ✓ Dehydrated Skin
- ✓ Poor Circulation
- ✓ Devitalised Complexion

For optimum results, Aura recommends a systematic treatment programme combining CACI Microdermabrasion, Ellipse IPL (Intense Pulsed Light), CACI ChromaOxy (Red and Blue Light Therapy with Oxygen Therapy) and CACI Micro Current Lifting and Toning. We would be delighted to discuss the best options for your own personal requirements.

In certain circumstances we may also suggest coupling treatments with specialised skincare products, such as from Decl or or Guinot (or other highly specialist product names), where we believe these will achieve even greater benefits.

If you want to see the array of celebrities and models now using CACI, as well as press coverage extolling the treatment benefits, please see details on the [CACI site](#).

If you want to find out more technical details about the CACI Quantum, please see details on the [CACI site](#).

If you want to find out more technical details about the CACI ChromOxy, please see details on the [CACI site](#).
